

VD 570 - Robust Inline differential pressure flow sensor for wet compressed air and gases

FIELD OF APPLICATION:

- Wet compressed air
- Technical gases
- Mixed gases: e. g. Natural gas/H₂
- LPG
- Propane
- CO₂

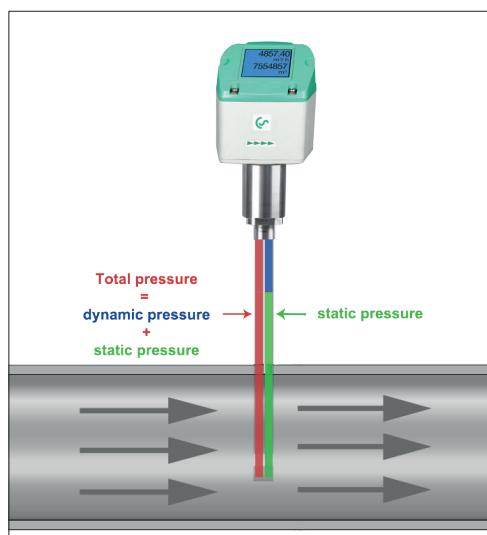

Benefits at a glance:

- Ready-to-use compact flow meter to minimize installation effort - pressure and temperature compensation integrated
- Provides flow rate, total consumption, temperature and pressure
- Differential pressure sensor element with unique sensitivity, measures highly accurate at < 2 m/s
- Large flow range with extended turn down ratio thanks to the use of measuring sections with reduced inner diameter
- Shorter inlet sections required due to the use of an averaging pitot tube
- Robust design, no moving parts
- Sensor head can be removed for calibration purposes

Averaging pitot tube

The integrated, precise differential pressure sensor measures the differential pressure/dynamic pressure at the sensor tip. The pressure depends on the respective gas velocity. The flow is therefore easy to determine by means of the pipe diameter.

The additional measurement of temperature and absolute pressure and calculation of the relevant density means that measuring can be carried out for various gases, a wide variety of temperatures and pressures.
